

This blog post will show you how to install and upgrade to the newest version of SEED (v7r2) with the correct tools and materials. If you want to know more about how we can professionally help your company put together a custom version of SEED, please feel free to reach out! We're here for you 24/7. All feedback is appreciated and will be considered with future releases. Happy Gaming, The SEED Team @SEElectrical on Twitter @SEElectrical on Instagram

To download the latest version of SEED, please visit this website: <https://tldr.sc/SEEDV7R2/> As you can see in the above link, there are many different versions of SEED that can be downloaded. I have put together a video showing how to install SEED with only ONE tool. Your computer does not need any additional software to run your game. Many people have had issues installing SEED because it requires additional drivers and other software that is not needed for most computers today.

We are here to help with any issues that you might have installing your game. We will be on the front lines to answer your questions, and help you fix whatever problem you may have. If you want to take a look at previous version of SEED, visit our website: <https://tldr.sc/SEEDV4R2/> Installation Tools: • USB Port - This is all that is needed for installation! Nothing else is needed! The video will show how to install SEED using a single USB port. There are other methods available for cutting down on cables, but this method works flawlessly within a single USB port. • PS/2 Keyboard - This is all that is needed to add a keyboard! Nothing else is needed! The video will show how to add a PS/2 keyboard. You can also easily add a USB keyboard. The PS/2 Cord may have been left out from the video, but this is an optional step that you can choose to do instead of using a USB cord to connect your keyboard and mouse (if you want). • Mouse - As long as you have a mouse, you can easily connect it to your computer and get SEED running. You can either connect your mouse directly through the USB port or through the HID protocol. • Monitor - This is all that is needed for a screen! Nothing else is needed! You can use any monitor you want (LCD, CRT, etc.). The video will show how to install SEED using a single monitor. There are many other options available to cut down on cables, but this method works flawlessly within a single monitor. • Sound Card - This will only be needed if you do not already have a sound card in your computer (for example: NO sound card, onboard sound). If you already have a sound card in your computer, you do not need to install this card.

Your computer must be able to run Windows Vista or later for properly installing and running SEED.
